Objective

Computer Science undergraduate seeking Software Engineering, AI, or Data Science opportunities. Strong foundation in Java, data structures, algorithms, and object-oriented programming, with growing expertise in Python, SQL, and cloud technologies. Passionate about building scalable applications, solving real-world problems, and continuously learning emerging technologies.

Education

Koneru Lakshmaiah Education Foundation

Aug 2023 – 2027

B.Tech in Computer Science and Engineering (Honors)

CGPA: 9.36/10

Relevant Coursework: Data Structures, Artificial Intelligence, Databases, Statistical Methods, Distributed Computing

Technical Skills

Programming & Query Languages: Java, SQL, Python (Basics).

Data Analysis: Data Extraction & Validation, Statistical Analysis, Predictive Modeling, Machine Learning, Data Processing & Pipelines

AI / GenAI: LLM Integration, REST API Development, Prompt Engineering

Cloud, Databases & Big Data: Microsoft Azure, MySQL, MongoDB, Google BigQuery, Apache Spark

Tools: Git, Docker, CI/CD (GitHub Actions), Excel, Power BI, Ollama (Local LLM Deployment)

Experience

Labmentix — Data Science with AI Intern

Jun 2026 – Present

- Developed 3 ML projects—Facial Recognition, Multi-Agent AI, and Shopper Spectrum—covering computer vision, AI agents, customer segmentation, and recommendation systems.
- Applied Python, Machine Learning, Computer Vision, KMeans clustering, Streamlit, and AI APIs to build practical end-to-end solutions.

Xylofy AI — Data Science Intern

Jun 2026 – Jul 2026

- Built end-to-end machine learning models for sales forecasting, employee attrition prediction, and house price prediction using real-world datasets for regression and classification problems.
- Performed data preprocessing, feature engineering, train-test splitting, and model evaluation using accuracy and error analysis to improve prediction quality and business insights.

Full Stack Web Development Internship

Apr 2025 – Jun 2025

- Built REST APIs and relational database structures to support full-stack applications end-to-end.
- Optimized SQL queries and backend logic, improving data retrieval performance for application workflows.

AICTE Generative AI Internship

Jan 2025 – Mar 2025

- Built a generative AI chatbot in Python/TensorFlow, applying LLM-driven analysis to business problems.
- Designed REST APIs and backend data services on GCP, extracting and validating data with JWT-secured access.

Cisco Networking Virtual Internship

May 2024 – Jul 2024

- Designed and analyzed simulated enterprise networks to optimize routing and security configurations.

Projects

Student Dropout Risk Dashboard

Python, BigQuery, Apache Spark

- Built BigQuery and Spark pipelines to combine and validate multi-source student data.
- Developed a predictive risk-scoring model to identify at-risk students for early intervention.

Multi-Agent AI Customer Support Assistant

Python, FastAPI, MongoDB, FAISS, Next.js

- Developed a multi-agent system routing customer queries to specialized support agents.
- Implemented RAG with FAISS and API-driven agent orchestration with a Next.js interface.

Ollama IDE (Local AI Coding Assistant)

React, Node.js, Ollama, Python (Developing)

- Developing a local LLM-powered IDE for code generation, debugging, and workflow automation.
- Building context-aware AI assistance using project and file-level analysis.

Certifications

- Microsoft Certified: Fabric Data Engineer Associate
- Microsoft Azure Fundamentals (AZ-900)
- MongoDB Certified Developer Associate
- Cambridge Linguaskill English Certification
